## Introduction

Drivers time-release buttons allow release of *points* locking. *Routes* can then be reset.

The buttons are located at or near some home or home/starting signals.

Example of a Drivers time-release button

---

## Changing the route setting

### Driver or track vehicle operator

1. Tell the *Signaller* that your *train* or *track vehicle* is stopped at the signal.

### Signaller

2. Make sure that the signal protecting the points to be altered is at STOP.
3. Tell the *Driver* or *track vehicle operator* about:
  - the route changes, and
  - the need to press the Drivers time-release button.

### Driver or Qualified Worker

4. If the Signaller has given authority, press the Drivers time-release button.

### Signaller

5. Wait until the red time-release light is lit.
6. Reset the route as required.

### Driver or track vehicle operator

7. Follow the Signaller's instructions.
